

The 4L TROPHY™ offsets all of its CO2 emissions.

In partnership with Climat Mundi, the 4L Trophy has chosen to make a voluntary contribution to offset the unavoidable greenhouse gases which are emitted by the vehicles of the organisers and the participants. **This contribution will be financed in its entirety by the organisers.**

The 4L Trophy™ is financially supporting a program in India overseen by Climat Mundi which aims to conserve the environment and to improve the population's standard of living.

The project involves producing electricity by burning residues from farming which were not previously put to effective use. **It is registered under the UN Framework Convention on Climate Change (the Kyoto Protocol) as a CDM project (Clean Development Mechanism) under number 0971.**
